- 9.6.4 RAIL modelling and calculations of short specimens
- 9.6.5 Results of short specimens

## 10 TRACK STABILITY AND LONGITUDINAL FORCES.

- 10.1 Introduction
- 10.2 Simple track stability models
- 10.2.1 Straight beam in buckling in case of an elastic lateral resistance
- 10.2.2 Rail track buckling with misalignment and constant lateral shear resistance
- 10.3 Advanced track buckling models
- 10.4 Longitudinal forces
- 10.4.1 General considerations
- 10.4.2 Modelling of the longitudinal force problem
- 10.4.3 Example of longitudinal force calculations

## 11 TRACK MAINTENANCE

- 11.1 Introduction
- 11.2 General maintenance aspects.
- 11.3 Manual method of track geometry improvement
- 11.4 Rail-grinding trains
- 11.5 Correcting weld geometry
- 11.5.1 STRAIT principle
- 11.5.2 Mobile weld correction
- 11.6 Tamping machines
- 11.6.1 General considerations
- 11.6.2 Tamping principle
- 11.6.3 Smoothing principle of modern tamping machines

- 11.7 Stone blowing
- 11.8 Design tamping
- 11.9 Ballast stabiliser
- 11.10 Ballast cleaner
- 11.11 High temperatures
- 11.12 Maintenance of the track structure
- 11.12.1 Rails
- 11.12.2 Sleepers
- 11.12.3 Switch maintenance
- 11.13 General observations on track renewal
- 11.14 Manual track renewal
- 11.14.1 Renewal of sleepers
- 11.14.2 Renewal of rails
- 11.15 Mechanical track renewal
- 11.15.1 Introduction
- 11.15.2 Track possession
- 11.15.3 Gantry crane method
- 11.15.4 Track section method
- 11.15.5 Continuous method
- 11.15.6 Track renewal trains
- 11.16 Switch renewal
- 11.17 Track laying
- 11.17.1 General considerations
- 11.17.2 Track construction trains
- 11.17.3 Platow system
- 11.17.4 TGV tracks France

## 12 INSPECTION AND DETECTION METHODS

- 12.1 Ultrasonic rail inspection
- 12.1.1 Introduction
- 12.1.2 The NS ultrasonic train
- 12.1.3 Probe system
- 12.1.4 Detection area
- 12.1.5 NS Ultrasonic inspection program
- 12.2 Recording systems
- 12.2.1 Introduction
- 12.2.2 Some aspects of geometry recording
- 12.2.3 Assessment of track quality for maintenance decisions
- 12.2.4 The NS track recording system BMS
- 12.3 Recording of track geometry according to BMS-1
- 12.3.1 Selecting the measuring system
- 12.3.2 Measuring principle
- 12.3.3 Instrumentation
- 12.3.4 Signal analysis
- 12.3.5 Analog output
- 12.4 Recording of vertical rail and weld geometry using BMS-2
- 12.5. Deterioration of track geometry
- 12.5.1 Introduction
- 12.5.2 Deterioration rates of geometry
- 12.6. Computer-aided track maintenance and renewal
- 12.6.1 Philosophy

- 12.7 Basic data for predicting and planning
- 12.7.1 Introduction
- 12.7.2 Track geometry
- 12.7.3 Management information
- 12.7.4 Rational rail management
- 12.7.5 ECOTRACK
- 13 RAILWAY-INDUCED GROUND VIBRATIONS AND NOISE
- 13.1 Introduction
- 13.2 Some definitions

- 13.3 Ground vibrations
- 13.3.1 Introduction
- 13.3.2 Wave propagation in soils
- 13.3.3 Human perception
- 13.3.4 Measured vibrations
- 13.3.5 Vibration reduction
- 13.3.6 Measures for ballastless track
- 13.3.7 Measures for slab track
- 13.3.8 Measures for tracks in the open
- 13.4 Railway noise
